-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

a. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Millard et al.

Millard discloses a pilot information display device comprising displaying a current attribute 13, receiving a target attribute (corresponding to the tip end of needle 12), finding a first capture initiation attribute 10 for the vehicle to initiate capture of the target attribute, and displaying the attributes on display 11.

Regarding claim 4, the current attribute is the current position of the vehicle from where it needs to be, the target attribute corresponds to the position on the display that needs to be captured, and the first capture attribute corresponds to the position on the display at 10 where capture is initiated.

Regarding claim 6, needle 12 shows a trajectory to the target attribute relative to the current attribute.

2. Claims 5 and 7-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. Claims 19-33 are allowed.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. Regarding applicant's remarks filed 3-18-04, on page 2 it is stated that Millard does not show a point at which the aircraft should initiate capture to attain a target attribute. However, in Figure 4 Millard clearly shows initiation point 10 corresponding to a speed value of 110 kts at which initiation of reaching capture speed 140 kts takes place. Thus, Millard clearly teaches a first capture initiation attribute, which is the point at which the air vehicle initiates capture by accelerating to reach target 12.
